Figure 7.20 Temple 4 wikipedia – Double headed serpent

It also answers the circular radius of Stonehenge. Longitude 120*45' **48.66934411**

As Carl informs us to; do note the final element in the seconds of longitude being the surface area of Stonehenge.

Temple 4's Longitude is 120* 45' 48.66934411 = 262,814.4582 – I'll get into Tikal's temples and area in another lesson as it will blow your mind even more, but first I have to show you something before the surprise at Tikal in order to understand a numerical relationship.

Looking back at what 5400 x 2 gives us grid vector 10,800 giving us Emerald Mound at a grid latitude 31* 38' 09.16" (10,800) seen in figure 7.21 via Google Earth 670ft long mound.

Figure 7.21 Google Earth, Emerald, Mound Mississippi
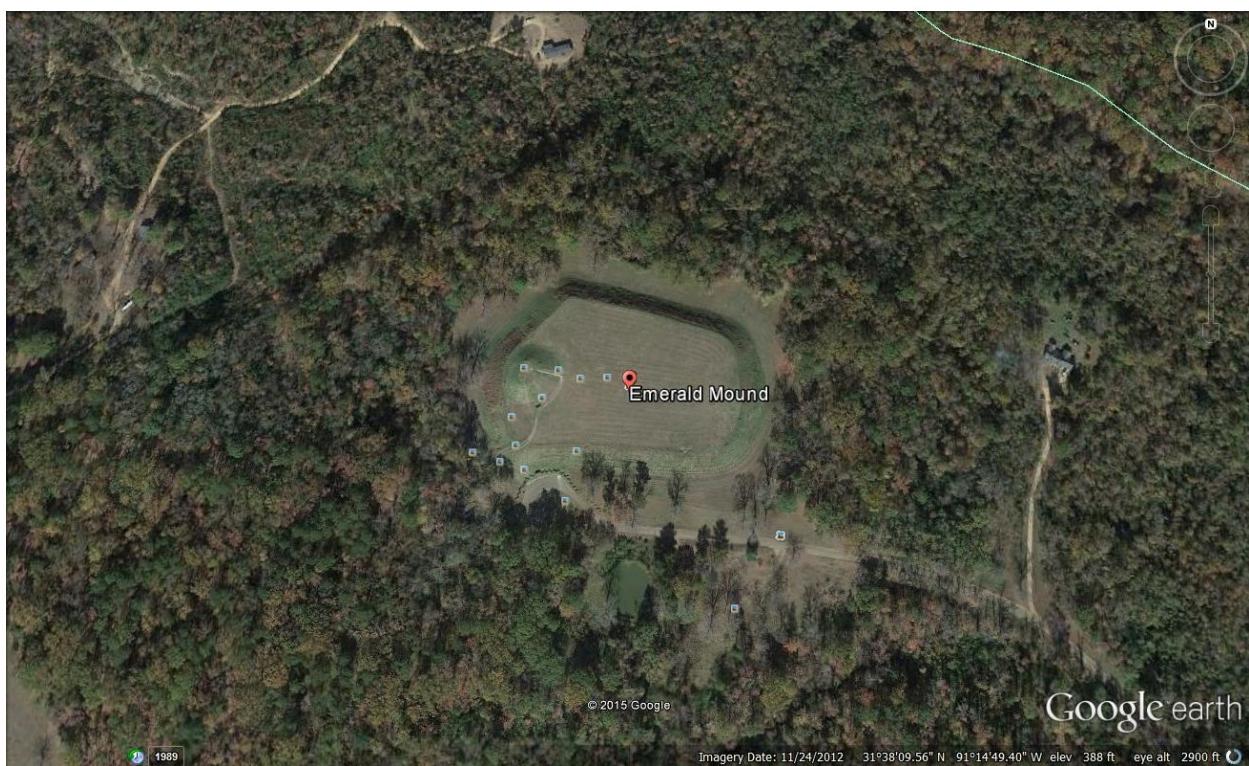

Looking back at the new earthwork of 5400 x 24 – 129,000 grid vector gives us Shark Mound and the square of 360* seen in figure 7.22. Grid longitude of North Biminis 500 foot long shark mound is 129,000.

Figure 7.22 Shark Mount North Biminis.
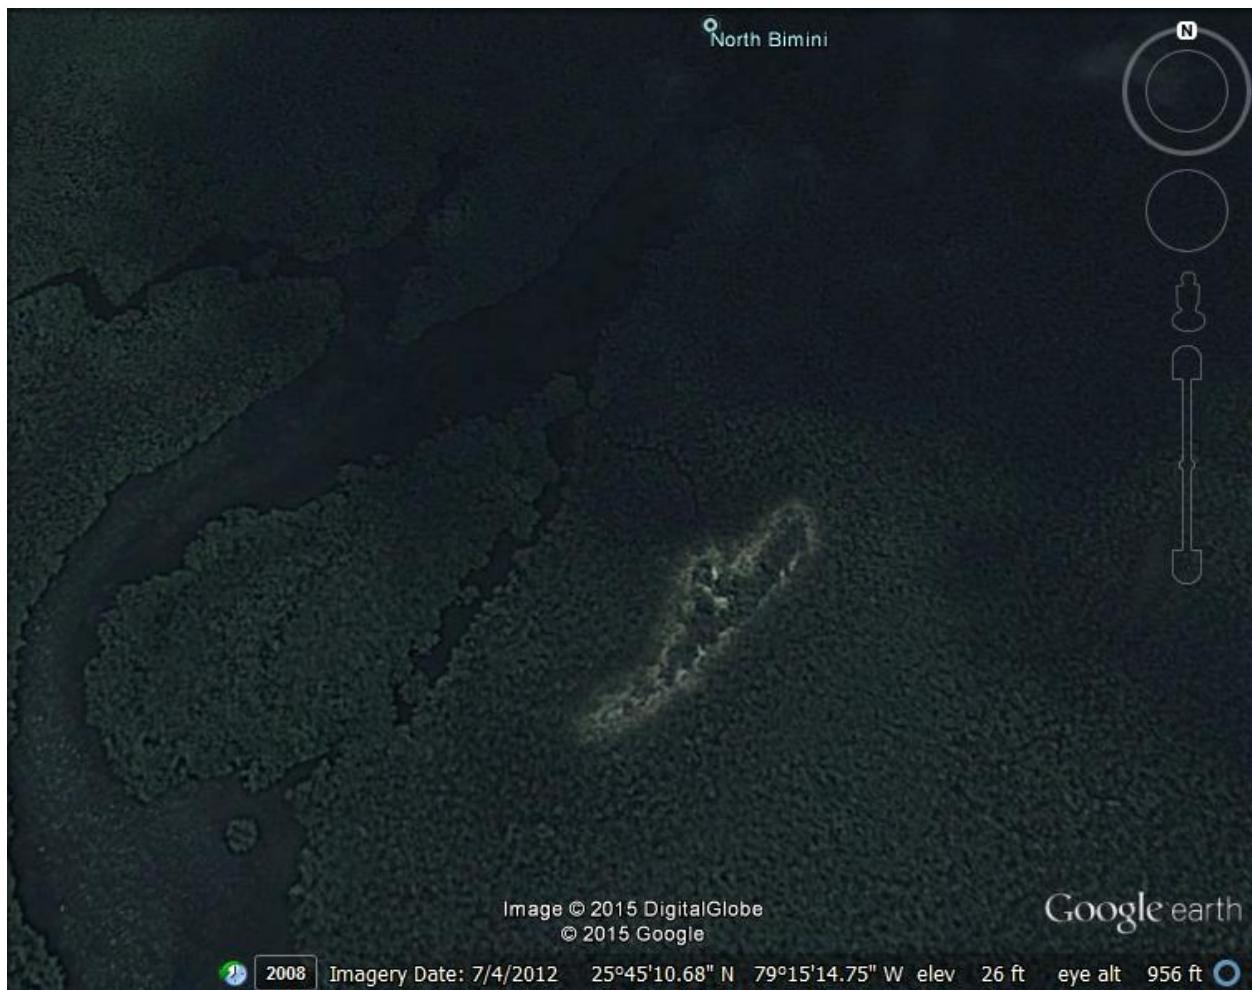

Shark Mound's Grid Coordinates
Longitude: 110* 22' 53.3" West of Giza = 129,000 as a whole number
Latitude: 79* 14' 52.75" w. Greenwich
Grid Vector:

What is the pyramid matrix all about? What would happen if these places on Earth didn't exist? Would it mean we're the first to inhabit Earth? It is clear that these structures and earthworks are a lot older then what history tells us? For those of you in the educational system, this means a lot of books especially on history will have to be re-written, that's for sure. We're talking about 1.6 million years ago *arguably* give or take whatever amount of years pending variables what other people tell me – that I haven't seen or know about. It still puts these structures and earthworks a lot older than we assumed they were. Pyramids were never built by the Egyptians that we learned about – and they told us that from the start when they got to Giza. I don't need to show you what other modern day best guessers inform us about do I? I'll I need to do is prove it through the pyramid matrix. Here is how I know the Pharaohs that we know didn't build the Giza Pyramids. Let's head back to Giza for a moment.

If we take the Vol. / Vec / H / L = 1.013944669
X 2π^2 x 2π^3 = 9929.184896

The 9929.184896 encodes another grid coordinate of another large formation of latitude. A 5-sided monster pyramid recently proven to exist despite when Carl Munck and a several others discovered it.

<u>Warning:</u> If you took the blue pill don't read further. For those of you that took the figurative metaphor "Red Pill" please look at figure 7.M.1.

Figure 7.M.1 – 5-sided Pyramid of Mars, Cydonia – Google Mars
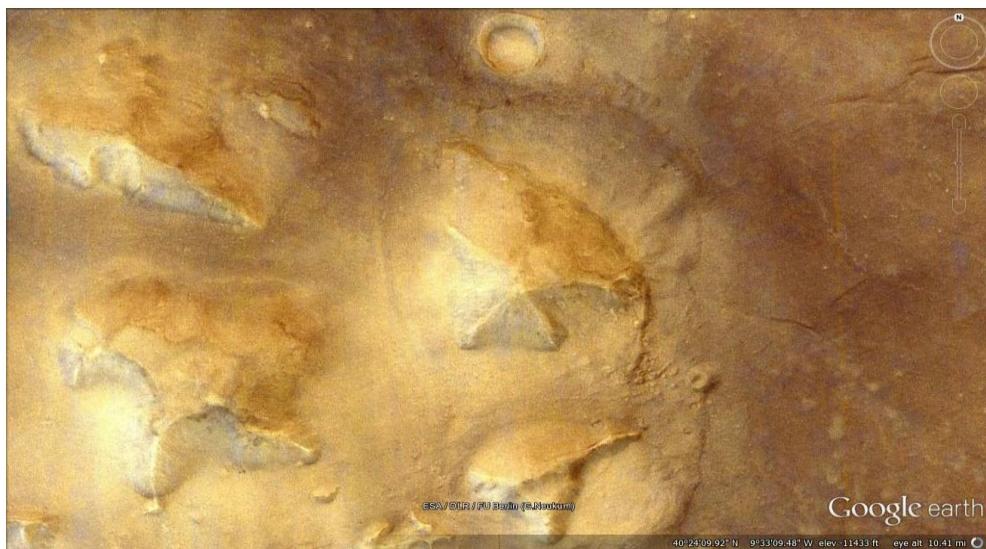

Can you see it? Let's put some outlines on it seen in figure 7.M.2.

Figure 7.M.2 – outlining the 5-sided monster pyramids Cydonia Mars.
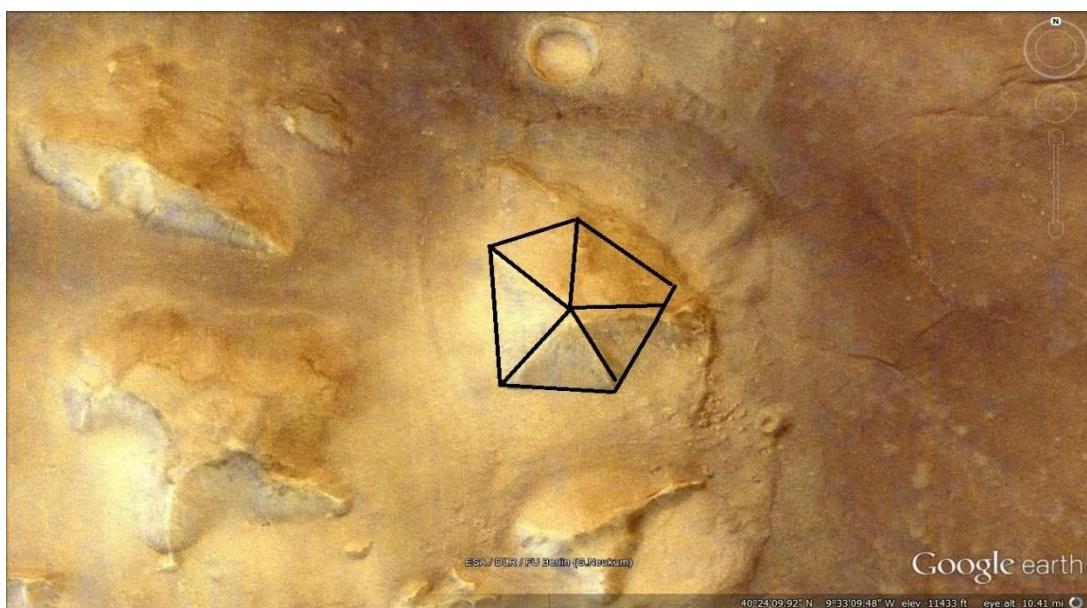

Figure 7.M.3 – Carl's illustration of the 5 sided pyramid

What's a pyramid doing on Mars? Why doesn't the general population of Earth know about this? We've heard about the face and seen it – which I'll get into very shortly. Why? Why don't we know about this? It's 100% proven to be of this pyramid matrix system and I'll get into this too. Let's have a look and proof this as much as we can.

Figure 7.M.4 Carl P Munck's illustration of Cydonia Mars
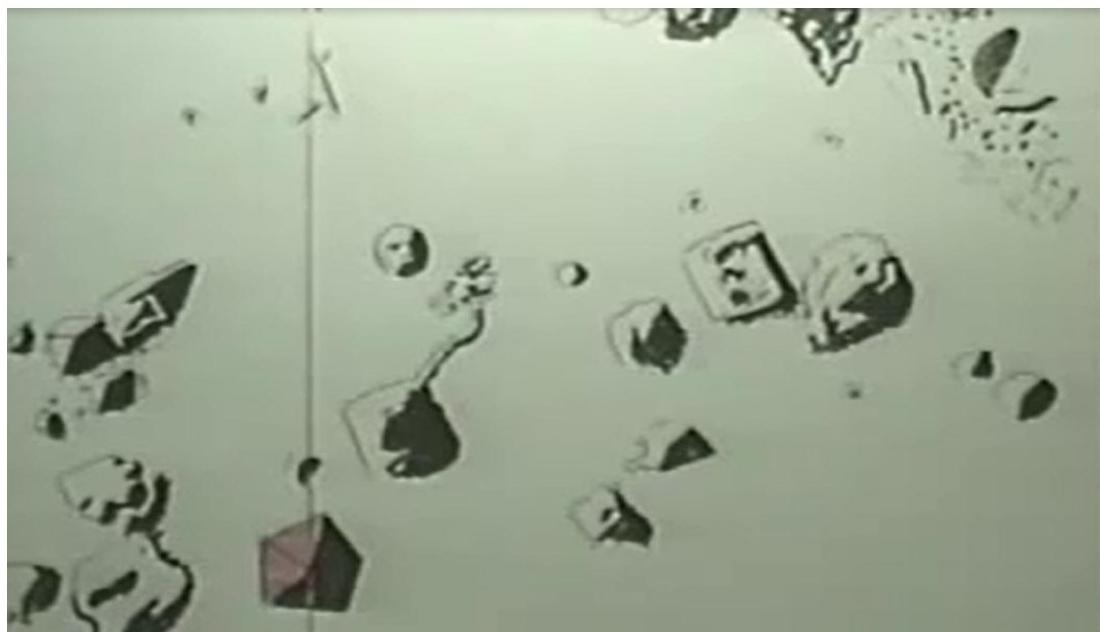

Figure 7.M.5 Google Mars' View of Cydonia Mars

Carl and I are not the only ones to know about this formation as he'll claim in his disc 1 video The Code. Certain military personal had this area of Mars well laid out before Carl's work even begun. This is real folks, there is no denying it. These are geometric shapes made by someone. The why is obvious now, just like what they did on Earth. The 5 sided pyramid 2/3rds of a mile high and intelligently made. Would it have marked out a Greenwich and Prime Meridian like at Giza? What if I told you the odds of this is answered through the Pyramid Matrix? All we have to do it the math. D & M pyramid is the first place to ask.

Again, the longitude "Greenwich/Prime Meridian" on Earth as it stands now is arbitrary right? Let's center this ideal over the D&M pyramid and see what happens.

D&ML Longitude / 360* = 27.58106916 = D&M Vector

About 10 miles north east we find the widely talked about "Face on Cydonia". It has been talked about and lied about for whatever reasons by whomever. Reasons I think we're all aware of now. Let's zoom in as much as we can seen in figure 7.M.6

Figure 7.M.6 – Zoomed in Face, Google Mars
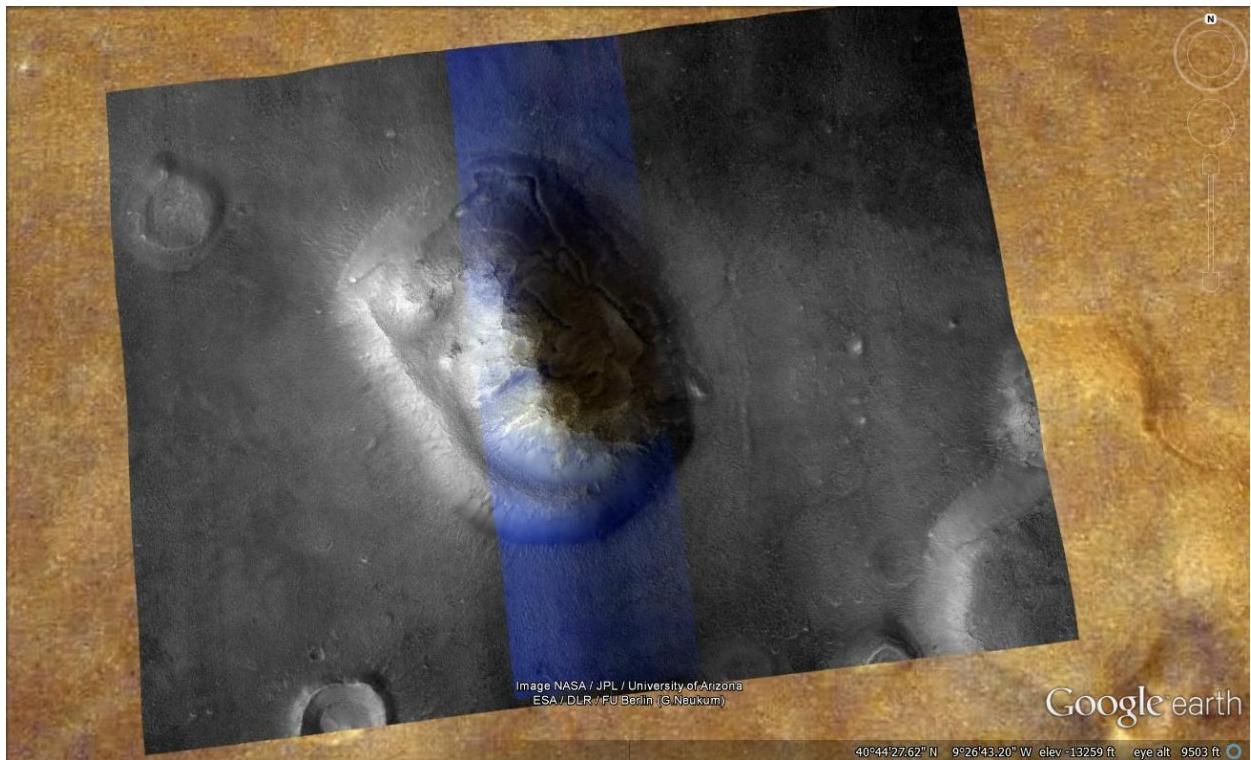

It has been deemed by some especially by mathematicians, cartographers, geologists, numerologists, physicists etc… that if you put a tetrahedron in a sphere of equal sides it's base corners will always touch about 19.5* offset of the middle of the sphere in this case being the equator as seen in figure 7.M.7 and 7.M.8.

Figure 7.M.7 Carl's illustration of the tetrahedron in a sphere
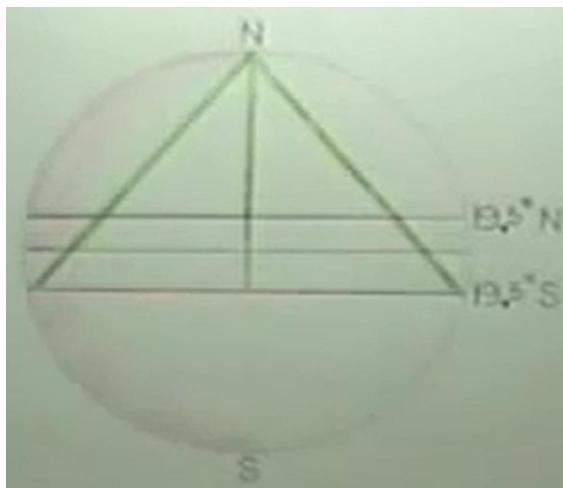

Figure 7.M.8
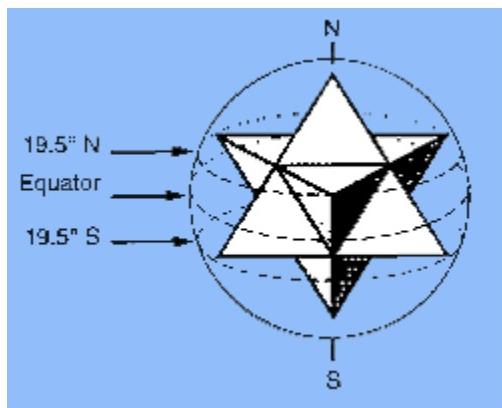

The tetrahedron can be explained more in spherical physics and I'll get into this later on too. I did say I'd get into the importance of geometric shapes how they are a defined important part of the pyramid matrix system and not just for global positioning systems. Another fact as well along the 19* north or south of the equator is where massive amounts of energy are formed through Mother Nature – being storms etc... It is also known on all planets at these coordinates is where "red energy" is seen and known to manifest seen in figure 7.M.9.

Figure 7.M.9 Jupiter's Red Energy
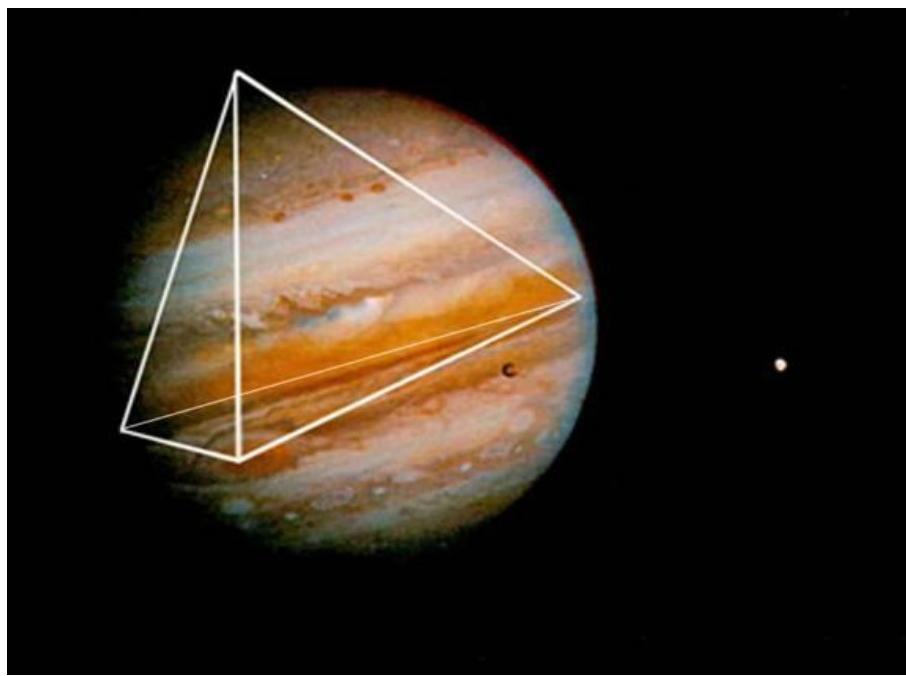

Figure 7.M.10 – close up of the red energy – via NASA

Is this a massive storm on Jupiter? This so called storm hasn't shifted or changed since NASA and other corporations have been able to view the planet. This correlates to the volcanoes cooking off at Hawaii, the 5 mile high Olympus Mons inactive volcano on mars… all at 19.5*. Natural energies continue to inhabitant this latitude on all planets – at least from I've seen or know about.

If we look at a tetrahedron for a moment seen in figure 7.M.11.

Figure 7.M.11 – Tetrahedron – Wikipedia, modified
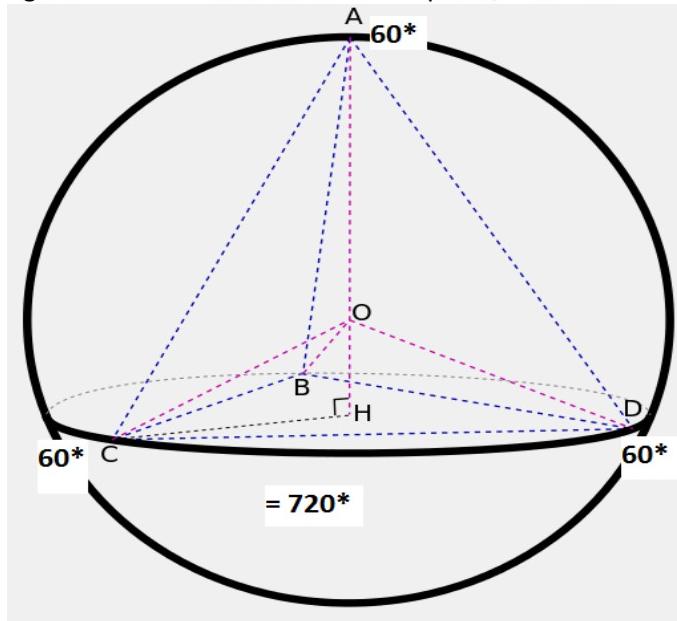

Each side of the tetrahedron consists of 3 corners being 60*. All 4 surfaces of the tetrahedron we get 720*, see table 7.T.1 for more information.

Table 7.T.1

	1	2	3	4	5
Polyhedron	Number of vertices, V	V×360°	Sum of surface angles	(Col.2) -(Col.3)	(Col.3) ÷720°
Tetrahedron	4	1,440°	720°	720°	1
Octahedron	6	2,160°	1,440°	720°	2
Icosahedron	12	4,320°	3,600°	720°	5
Cube	8	2,880°	2,160°	720°	3
Pentadodecahedron.	20	7,200°	6,480°	720°	9
VE	12	4,320°	3,600°	720°	5
4f Icosa	162	58,320°	57,600°	720°	80

If we take the 720* x 2π = 4523.893421 = / 41* / 11' = 10.03080" Can you guess what's there as Carl asks? Look at figure 7.M.12.

Figure 7.M.12 – Carl's math via the Face illustration
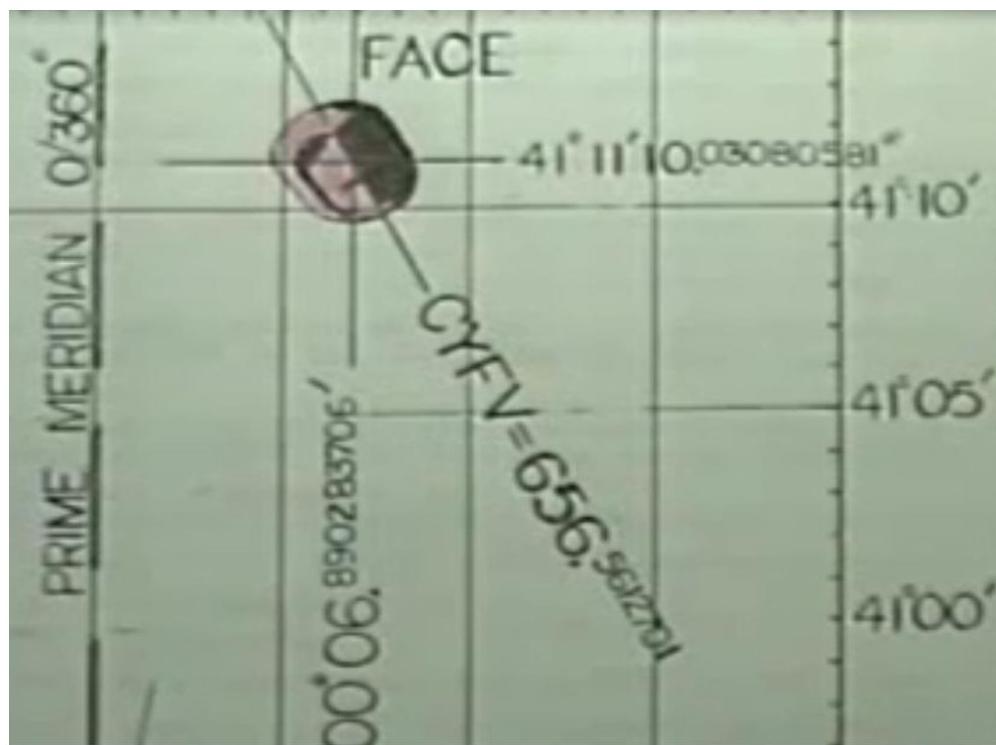

We find the grid latitude of the face, the Face of Cydonia, Mars. Carl's discovery of this besides "overwhelming" leads to more speculation and proofing of his own find. Let's continue to decode the face.

If we take 4523.893421 / √2160 = 97.3386882, the face knows the diameter of Stonehenge… coincidence? Are we really still thinking about coincidence at this point? Can Cydonia's face see Stonehenge? I like to refer to this as communicating. Let's see what else and let's ask the face if it can see the global matrix on Earth as seen in Carl's illustration below in figure 7.23.

Figure 7.23 – Earth's Pi Matrix illustration CPM.
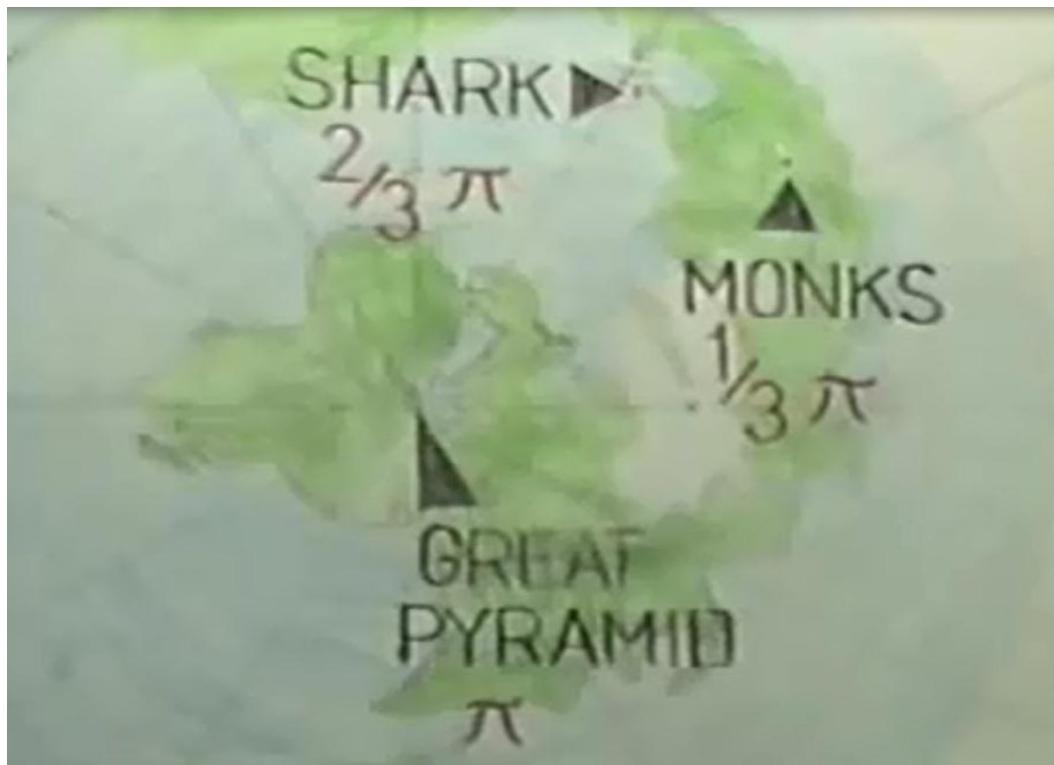

Taking the vectors found at the Great Giza Pyramid, Monks Mound Illinois and Shark Mound North Biminis…

1/3π x 2/3π x π = 00*06.890283706'. If the D&M pyramid is in fact Greenwich/Prime Meridian of 0*/360*, this will place the grid longitude dead center on the face of Cydonia seen in Carl's illustration figure 7.M.13.

Figure 7.M.13 – Cydonia's Face Grid Longitude
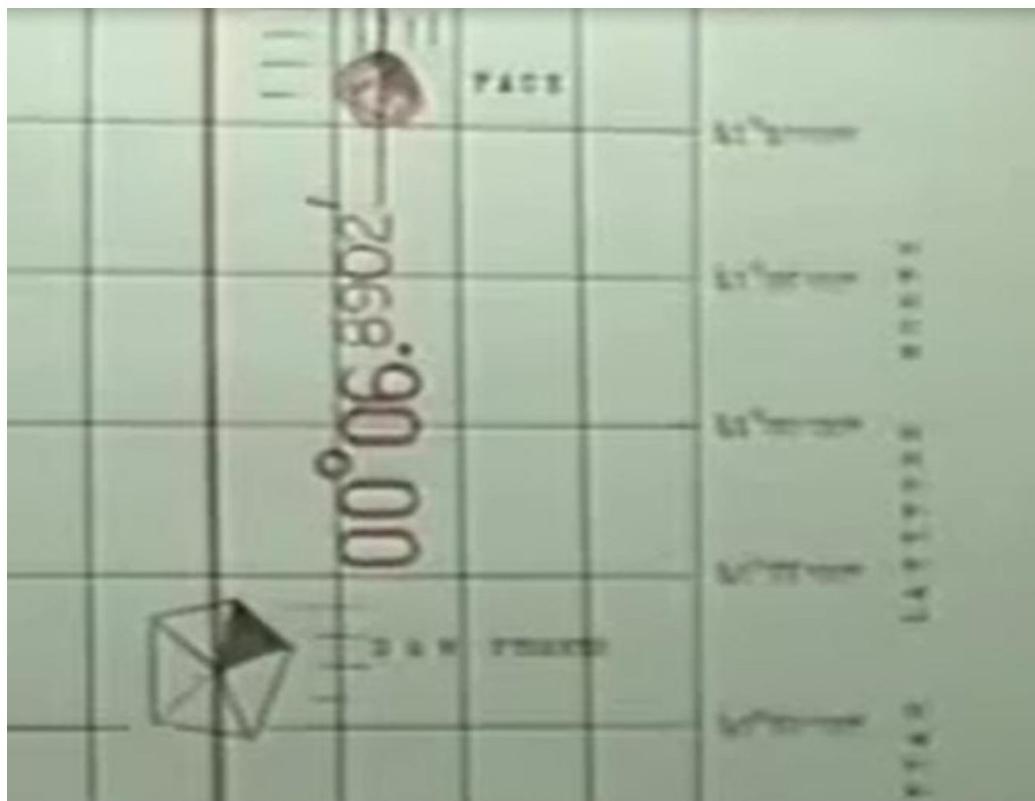

Did you completely swallow the Red Pill? I hope so, because the odds of if this being fake or a hoax just became a nightmare for those betting against this being real. Anything else we can prove? Remember back at Giza when we raised the Great Pyramid's grid vector to the 9th power? What happens when we apply it to this number 06.890283706?

Raise 06.890283706^9 = 35,005,310.83 Statute Miles = 56335586.952km's = 35,010,000 miles

What is this number? Can anyone guess it or has someone else discovered it? Measuring the distance from Earth to Mars really depends on "when" during their orbital rotation to one another. Looking at – http://www.universetoday.com/14824/distance-from-earth-to-mars/

The closest possible distance from Earth to Mars in miles is 33.9 million miles.

Here's a list of Mars Oppositions from 2007-2020 (source)

- Dec. 24, 2007 – 88.2 million km (54.8 million miles)
- Jan. 29, 2010 – 99.3 million km (61.7 million miles)
- Mar. 03, 2012 – 100.7 million km (62.6 million miles)
- Apr. 08, 2014 – 92.4 million km (57.4 million miles)
- May. 22, 2016 – 75.3 million km (46.8 million miles)
- **Jul. 27. 2018 – 57.6 million km (35.8 million miles)**
- Oct. 13, 2020 – 62.1 million km (38.6 million miles)

Take note of how close this number is and again, this would have been 1.6 million years ago when they built all these structures to relate to one another through mathematics.

Take 06.890283706 x 656.5612703 = 4,523.893423 = / 41* / 11' = 10.0308"

656.5612703 = Grid Vector of the face, a number I want you to remember – put this in the back of your mind and I will test you and remind you of its importance in the pyramid matrix especially at Tikal and other places.

If we take the most elementary number in astrology being POE – precession of the equinox's being 25,920 years… 25,920 / 2π^2 = 656.5612703, and again Cydonia's face answers the matrix.

What if we try another approach? Look at figure 7.24.

Figure 7.24 – Planets in relationship of orbit to the sun.
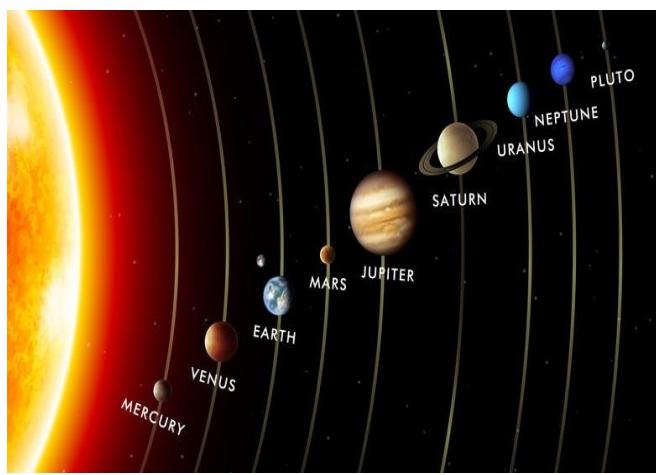

If we include the moon (which I'll get into so much later on), we find that Mars is the 5th planet from the sun. In the language of the matrix, that's 5 Pi.

656.5612703 x 5π = 10,313.24031 = Area of the 360* circle.

More tests? Sure, why not. Let's see how Mar's face speaks to Earth's face. The face of the sphinx faces an azimuth of 30π. When we divide its 5400 vector by 30π we found the Radian 57.29577. Could Poverty Point and Cydonia's Face speak to one another? See Carl's illustration in figure 7.25.

Figure 7.25 – Faces, 90*
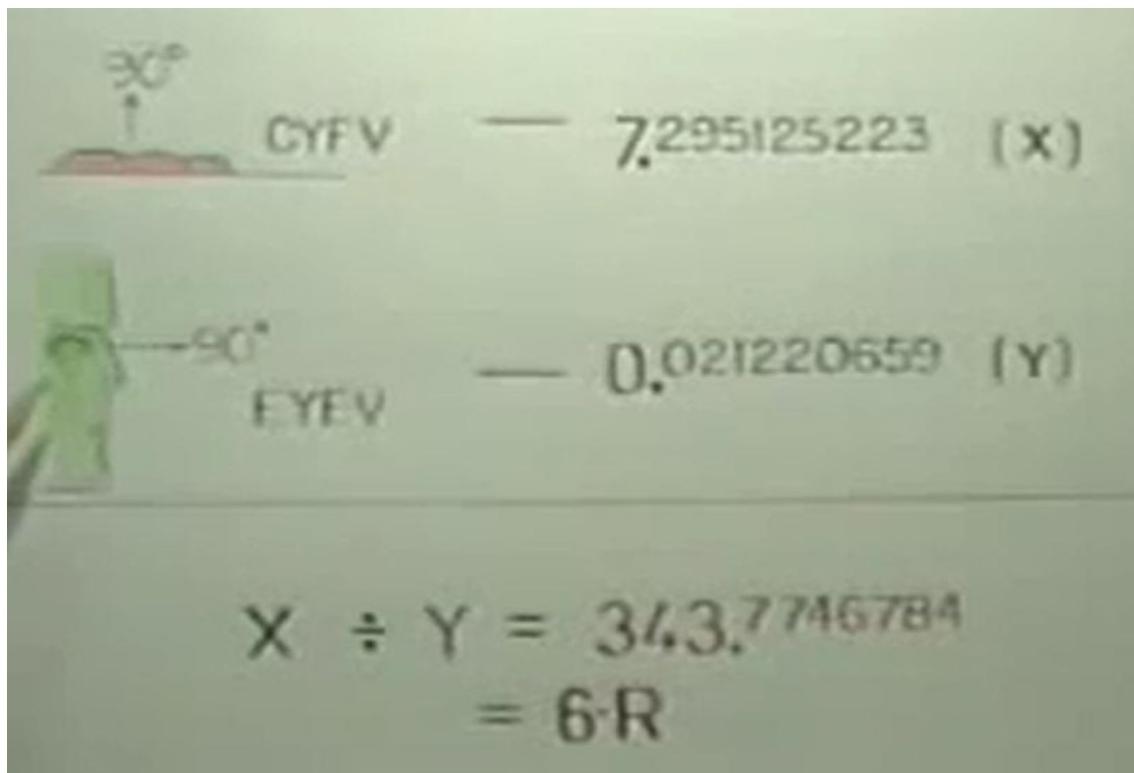

If we take Cydonia face's vector of 656.5612703 / 90* = 7.2951252 result (x)

If we take Poverty Point's vector of 1/30th the R = 1.909859 / 90* = 0.0212206 result (y)

X / y = 343.7746784 = 6R (the basic language of the matrix)

Keys of the Matrix – Cydonia, Mars

2π = 6.2831853 ∞ = 1.431359219
$2\pi^2$ = 39.47841760   DMV = 27.58106916
$2\pi^3$ = 248.050213 = GPV   CYFV = 656.5612703
POE = 25,920

25920 / $2\pi^3$ = CYFV
25920 / 27.58106916 = ∞
25920 x 27.58106916 = $2\pi^3$ = 248.050213 = GPV
25920 x 27.58106916 x 2π = GPV

DMV = D&M Pyramid on Mars, 5 sided pyramid
CYFV = Cydonia's Face Vector
GPV = Great Giza Pyramid's Vector
POE = Precession of the Equinox

If (as Carl explains) we ever lose our Great Giza Pyramid to whatever forces, it's original height and specifications will remain intact on Mars.

90* / R / 1.177245771 = 1.334297702
X360* = 480.3471728 ft

The Law is Universal – Mathematics, Radian Based Language of the Matrix

Remember when I said to keep the number 656.5612703 in the back of your mind? The outside diameter of the Goloring "Go Low" outer circle is 656.56ft. Over at Tikal Guatemala, the number 656.5612703 is everywhere in this matrix, almost a signature of the builders. Notice the platforms atop of the steps measures at a height of 6.56ft. Found on Tempe's 1,2,3,4 via a few different archeologists and other people's measurements. Temple 5's base width of the first step was measured at 65.6 ft in width.

What if we applied the entire number of Tikal's 6.56#ing system? We also find SAS (surface area of a sphere) although the decimal point is off. 6.565612703 x2 = 13.131225406 x pi = 41.252961208 (the top of the temple/pyramid does show 3 slits – decimal place?). Are these measurements of 65.6 and 6.56 just coincidences too? Would we in fact if re-measured with today's technology find 6.565612703 or 65.65612703ft? I bet good money on it if we still talking odds here, especially when we know that Earth's matrix applies to Mars – is that why we sent the rover to Mars?

X2 = two different places where the builders put the 6.56 and 65.5.
Xπ= the language of the matrix
41,252.961208 = SAS

If we cannot get an exact measurement down to the tenth decimal point, then this says it all really:

"With around 170 square kilometers (65.6 square miles) in size, Caracol is the most important archaeological site in Belize. In this archaeological park one finds the tallest Mayan structure of the country – the 46 meter (150 feet) tall "Caana" Temple which in Maya means the place in the heavens. http://www.hanahuac.org/hanahuac/blog/"

I'll proof Tikal in the next lesson in respect to these numbers and Carl's.

Lesson 7 Conclusion:

It is hard to believe what you are seeing, mathematics that defies all history taught to us. NASA has spent a small fortune on technology to travel to Mars as well continuing to probe it with the Rover(s). Yet, we don't hear of any life on Mars or any evidence of anyone home on Mars. Why? We've seen and heard about "flies" that are seen in the Rover's pictures made public, indicating that life can exist on Mars. We've seen so called human-like anomalies caught on camera too – although we're told differently because they – when measured are giant-like creatures and simply not possible. Giants… I'll get into the giant phenomena too later on. What is really going on? What really happened? Did either Earth's or Mar's humanoids build the pyramids and faces? If so, why don't we know about this? The Romans used to praise the God of Mars- aka, God of War. They're other religions and people who to this day still warship a God known as Mars. There is no question anymore on how old we really are, where we've been to and where we could possibly be going. We've not just been to Mars as I'll get into later

on. There is no reason to keep an open mind to this. Now you can apply logic to conclude that our ancient society had technology and a means to travel to one planet or another. What other pyramid matrix lies on Earth? Did you know they're over 300,000 pyramids now found on Earth? We'll get to these soon enough.
